

# Database project summary

Astghik Kostanyan  
Hovhannes Hovhannisyan  
Mehher Ghevandiani

Through this project, we gained experience in a variety of techniques and technologies related to database development. Here are is a brief summary:

- ERD Design: We learned how to design an ERD and how to create a visual representation of the database schema using draw.io.
- SQL Programming: We gained experience in SQL programming, gained hands-on experience of postgresql databases and the general SQL language.
- Database Normalization: We normalized the database so that the information is not repeated anywhere and is easy to maintain if the DB gets bigger.
- Effective teamwork and collaboration: As the team members were picked randomly, it was crucial to learn how to effectively communicate, divide tasks, and share understanding of the project goals and timelines. We ensured that everyone's strengths and skills were utilized effectively.

And most importantly all of us enjoyed working together and had a lot of fun during this project!
